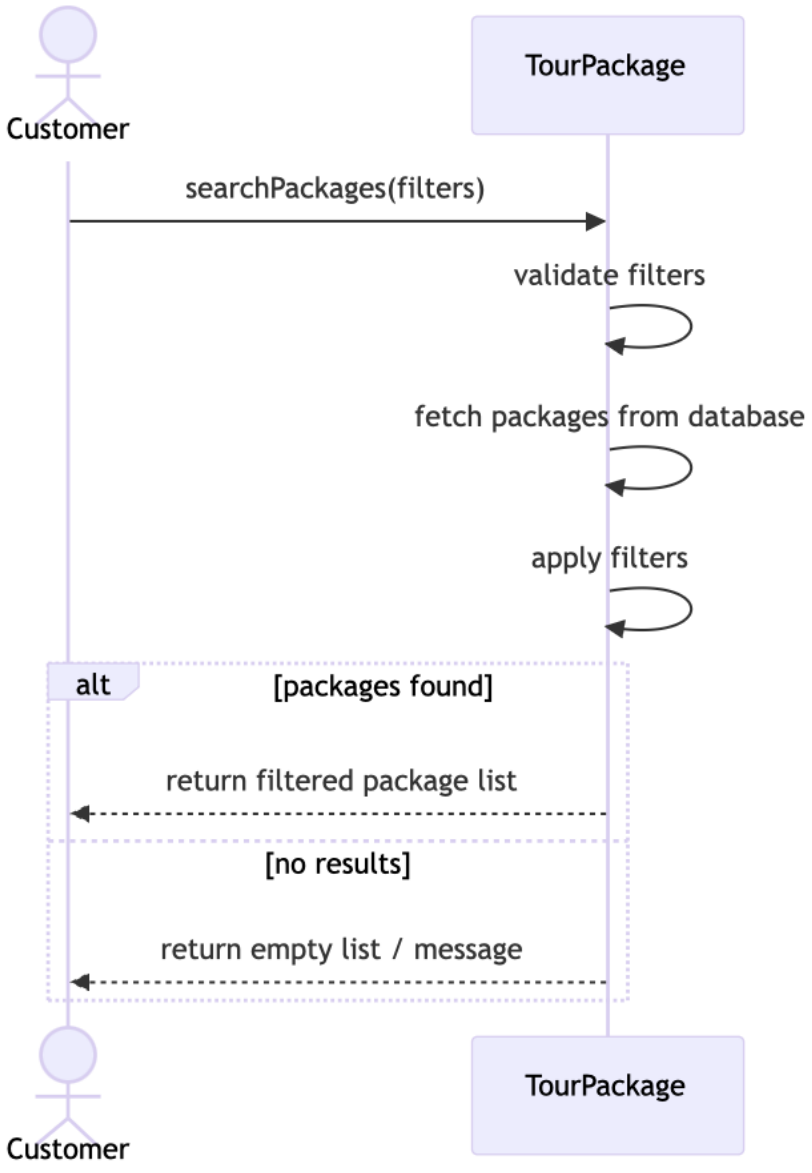
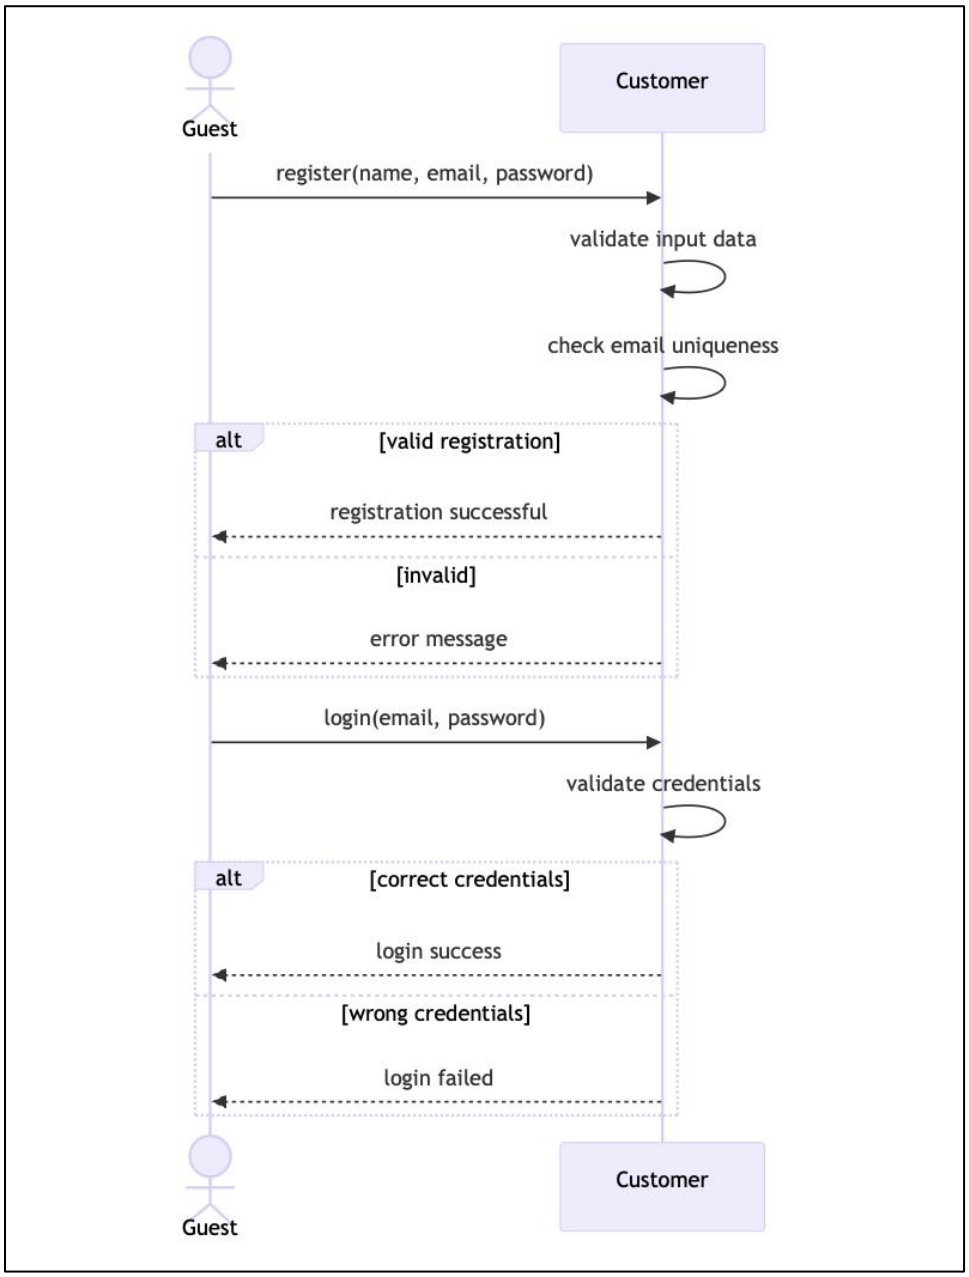
Amar & Ermi:

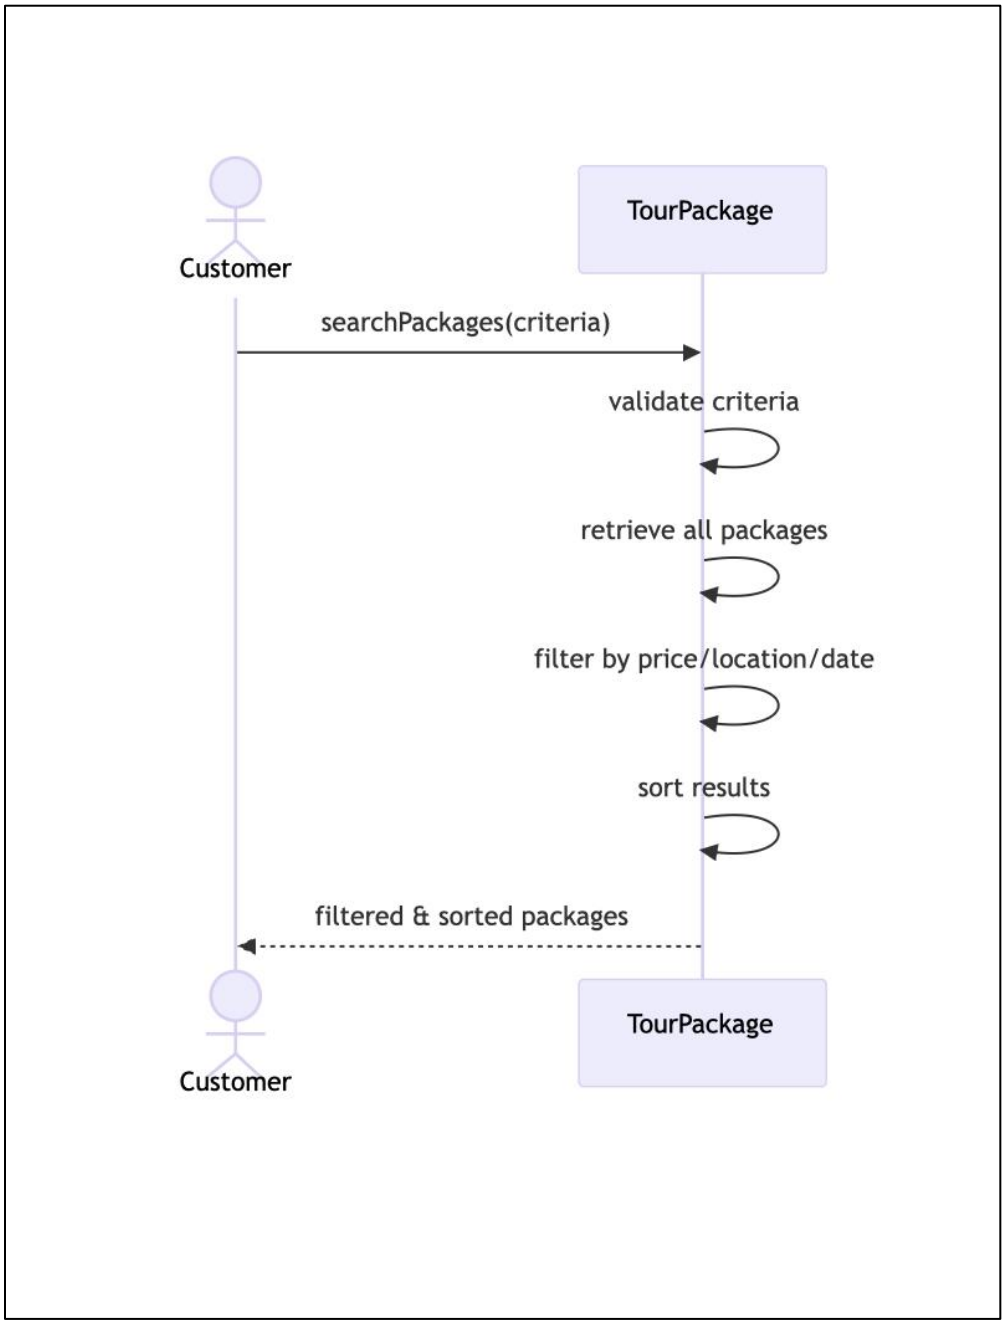
BR_TM_01 - View and Search Tour Packages



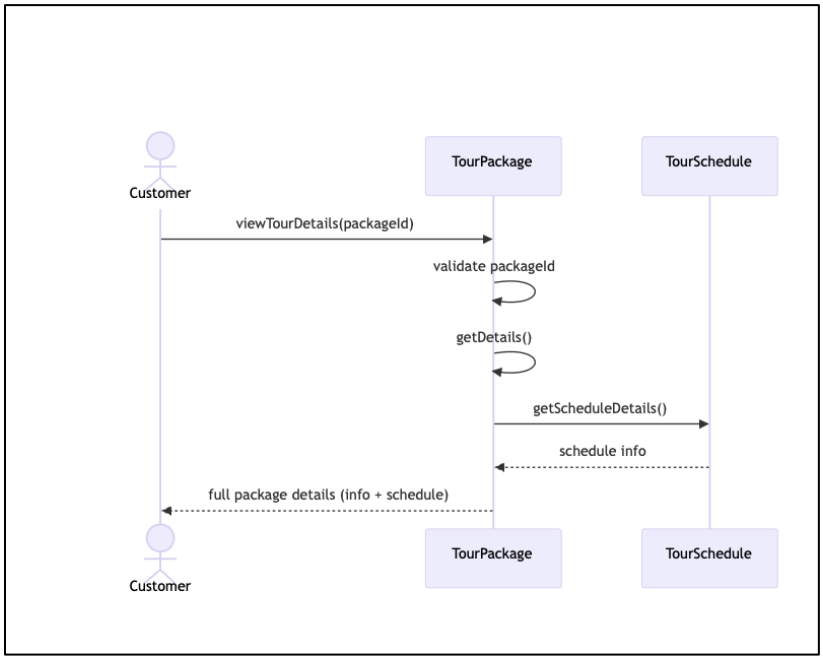
BR_TM_02 - Create Account and Login



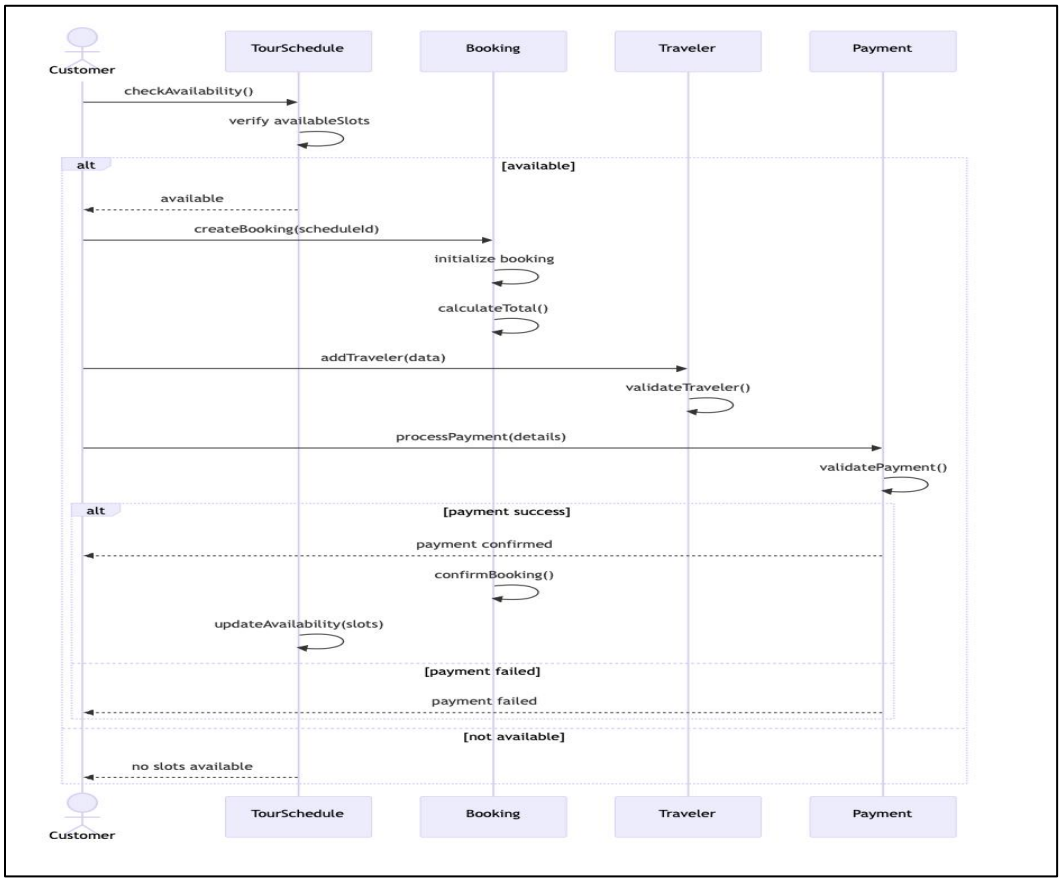
BR_TM_03 - Search and Filter Tour Packages



BR_TM_04 - View Tour Details

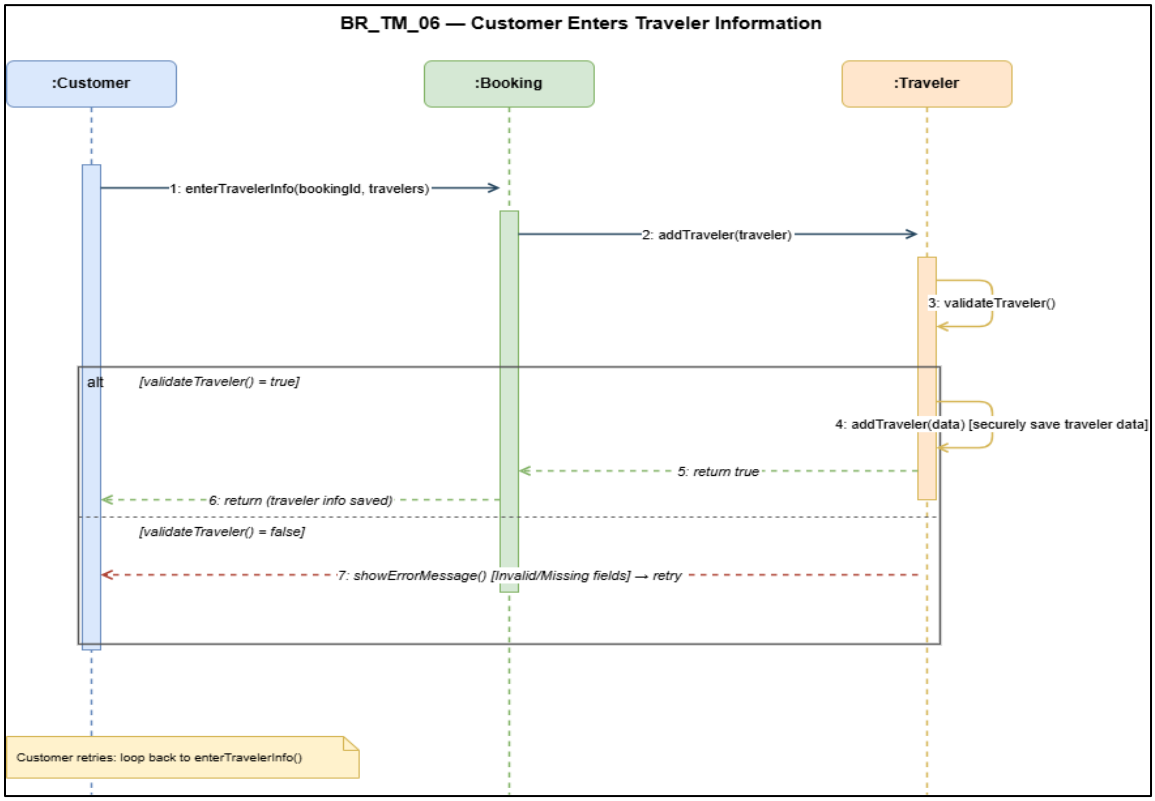


BR_TM_05 - Book Tour Package

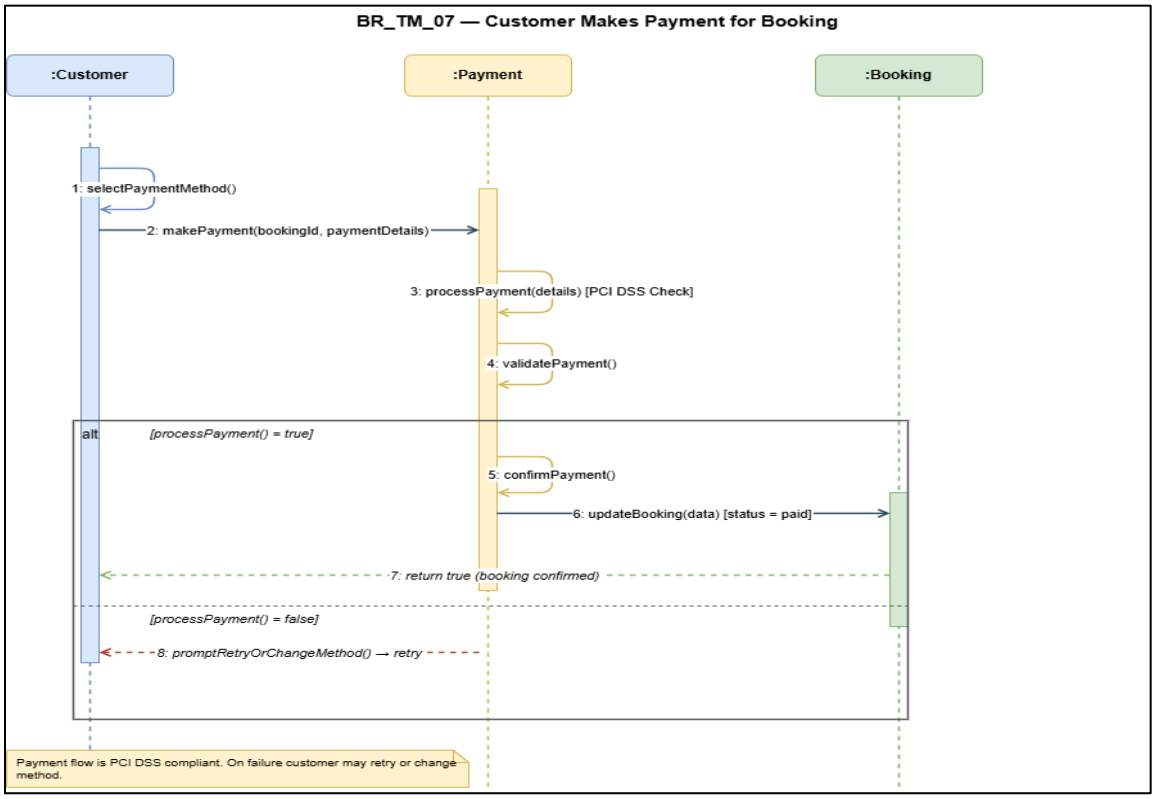


k

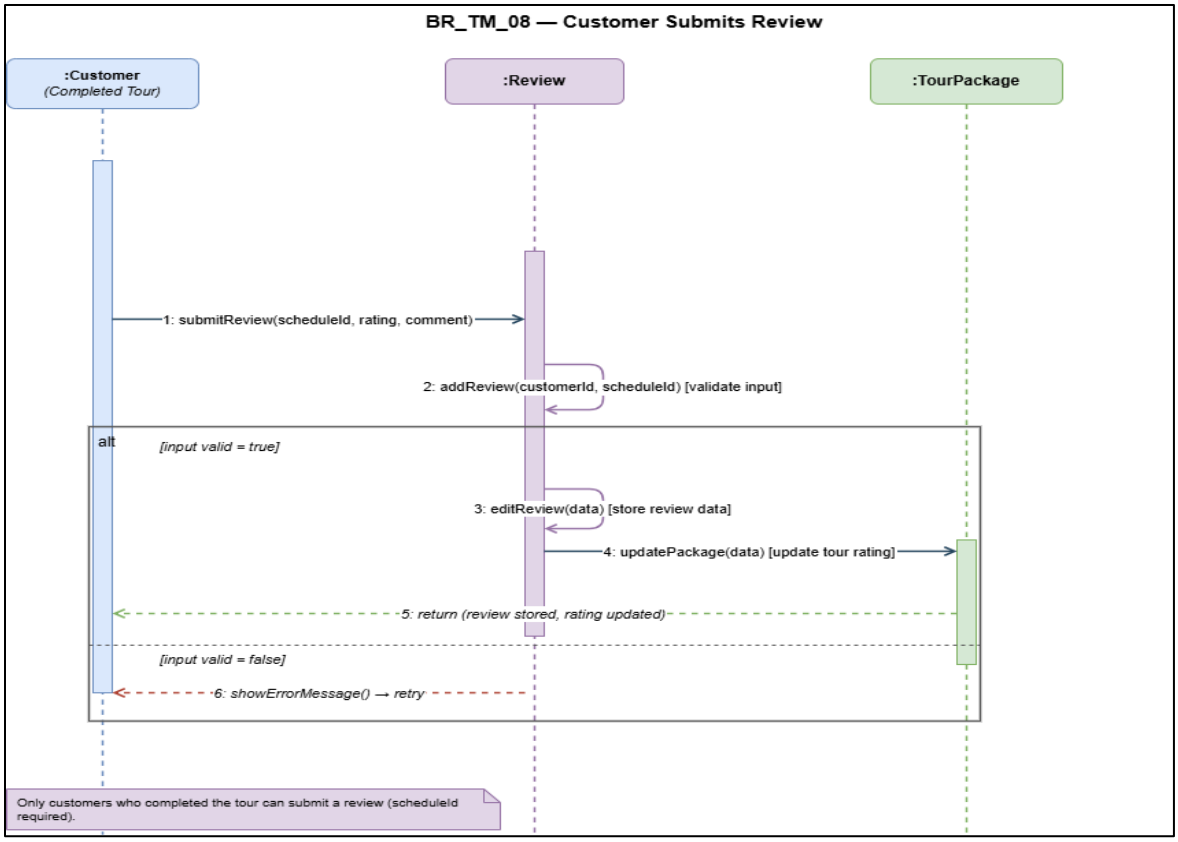
Alisa Dhima:



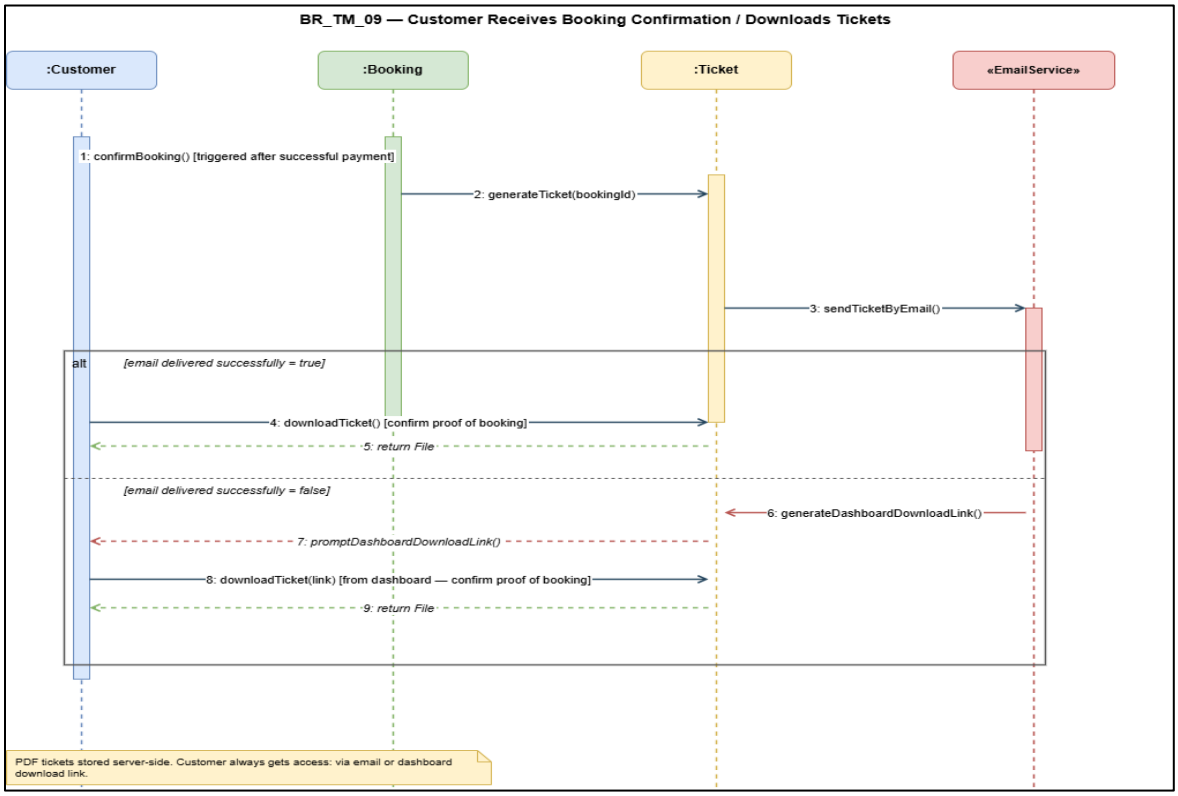
BR_TM_06 — Customer Enters Traveler Information
:Customer
:Booking
:Traveler
1: enterTravelerInfo(bookingId, travelers)
2: addTraveler(traveler)
3: validateTraveler()
alt
[validateTraveler() = true]
4: addTraveler(data) [securely save traveler data]
5: return true
6: return (traveler info saved)
[validateTraveler() = false]
7: showErrorMessage() [Invalid/Missing fields] → retry
Customer retries: loop back to enterTravelerInfo()



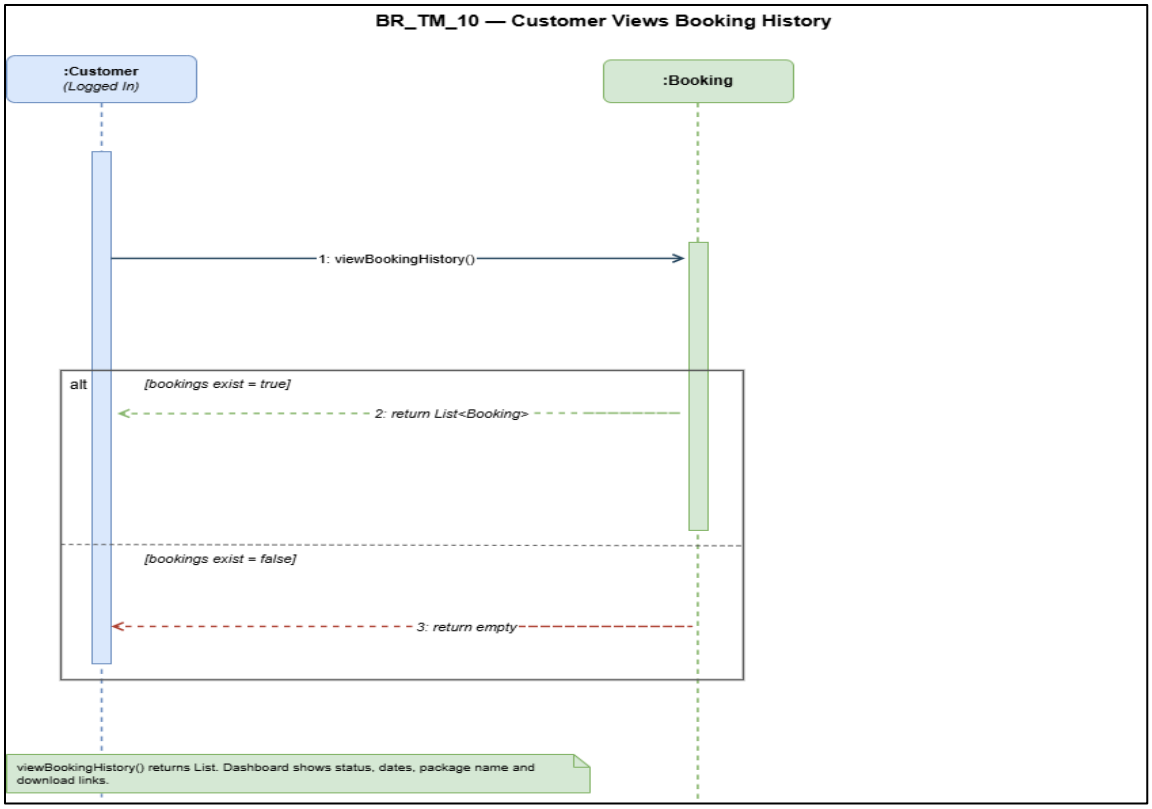
BR_TM_07 — Customer Makes Payment for Booking
:Customer
:Payment
:Booking
1: selectPaymentMethod()
2: makePayment(bookingId, paymentDetails)
3: processPayment(details) [PCI DSS Check]
4: validatePayment()
alt
[processPayment() = true]
5: confirmPayment()
6: updateBooking(data) [status = paid]
7: return true (booking confirmed)
[processPayment() = false]
8: promptRetryOrChangeMethod() → retry
Payment flow is PCI DSS compliant. On failure customer may retry or change method.



BR_TM_08 — Customer Submits Review
:Customer
(Completed Tour)
:Review
:TourPackage
1: submitReview(scheduleId, rating, comment)
2: addReview(customerId, scheduleId) [validate input]
alt
[input valid = true]
3: editReview(data) [store review data]
4: updatePackage(data) [update tour rating]
5: return (review stored, rating updated)
[input valid = false]
6: showErrorMessage() → retry
Only customers who completed the tour can submit a review (scheduleId required).



BR_TM_09 — Customer Receives Booking Confirmation / Downloads Tickets
:Customer
:Booking
:Ticket
«EmailService»
1: confirmBooking() [triggered after successful payment]
2: generateTicket(bookingId)
3: sendTicketByEmail()
alt
[email delivered successfully = true]
4: downloadTicket() [confirm proof of booking]
5: return File
[email delivered successfully = false]
6: generateDashboardDownloadLink()
7: promptDashboardDownloadLink()
8: downloadTicket(link) [from dashboard — confirm proof of booking]
9: return File
PDF tickets stored server-side. Customer always gets access: via email or dashboard download link.



BR_TM_10 — Customer Views Booking History
:Customer
(Logged In)
:Booking
1: viewBookingHistory()
alt
[bookings exist = true]
2: return List<Booking>
[bookings exist = false]
3: return empty
